Heuristic Evaluation

India's Last Minute App

About Project

Inspection of the app to identify the design problems and present profitable recommendation, using Heuristic evolution to enhance user experience.

10 Principle of Heuristic Evaluation:

①

Visibility of system status

②

Match between system and the real world

③

User control and freedom

④

Consistency and standards

⑤

Error prevention

⑥

Recognition rather than recall

⑦

Flexibility and efficiency of use

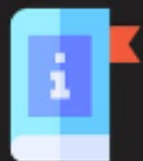

⑧

Aesthetic and minimalist design

⑨

Help users recognize, diagnose, and recover from error

⑩

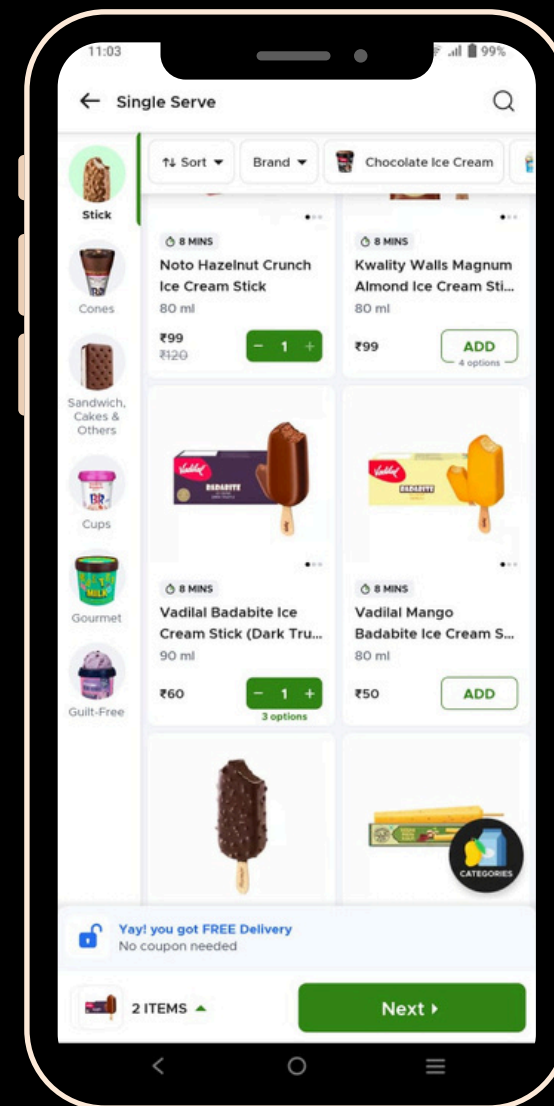

Help and documentation

01. Visibility of system status

The Design should always keep users informed about what is going on, through appropriate feedback within a reasonable amount of time.

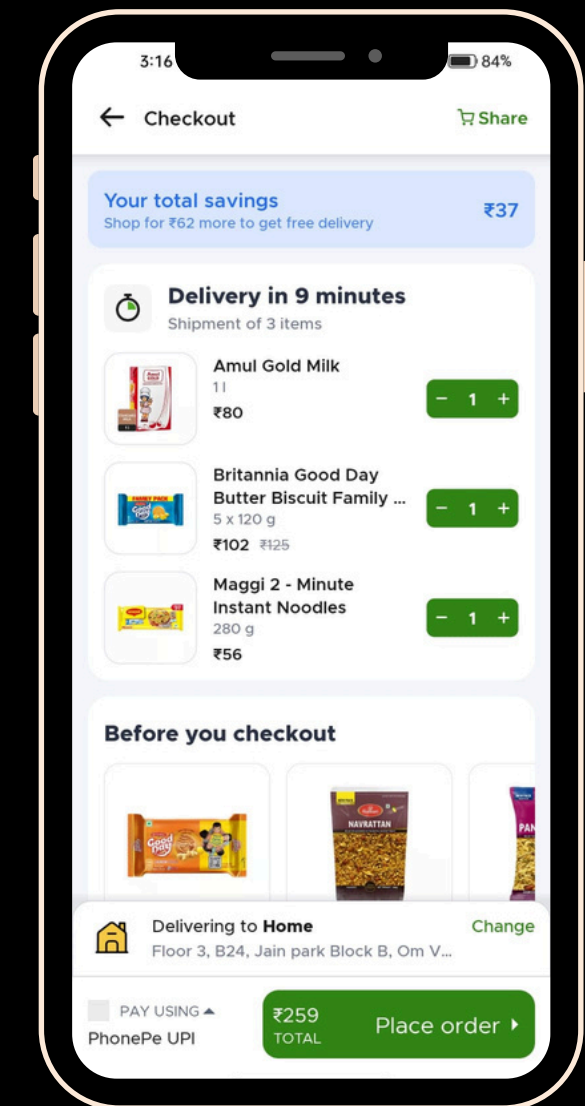

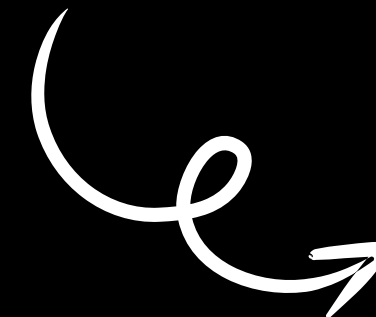

Issue:

There is no information about price, after adding multiple items into cart.

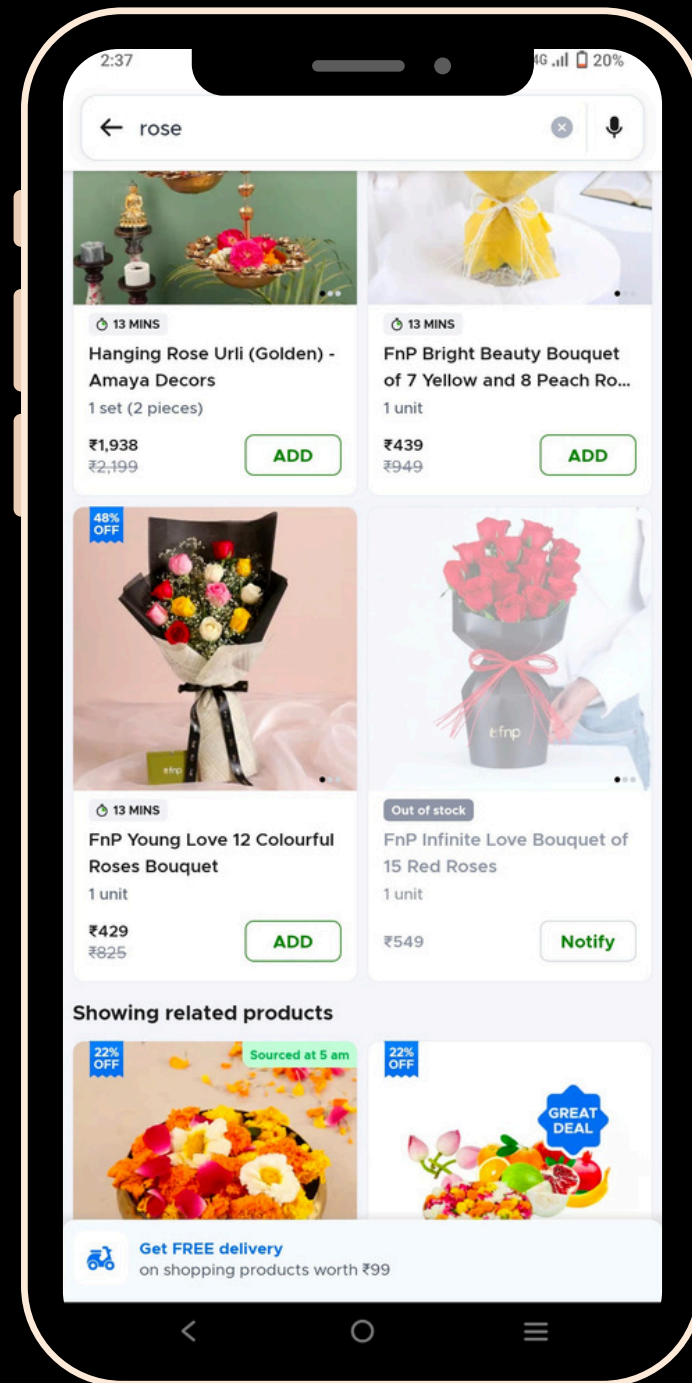

Recommendation:

There should be an option to see total price of the bill, after adding multiple items into the cart. So, user won't be confused about the final price.

01. Visibility of system status

The Design should always keep users informed about what is going on, through appropriate feedback within a reasonable amount of time.

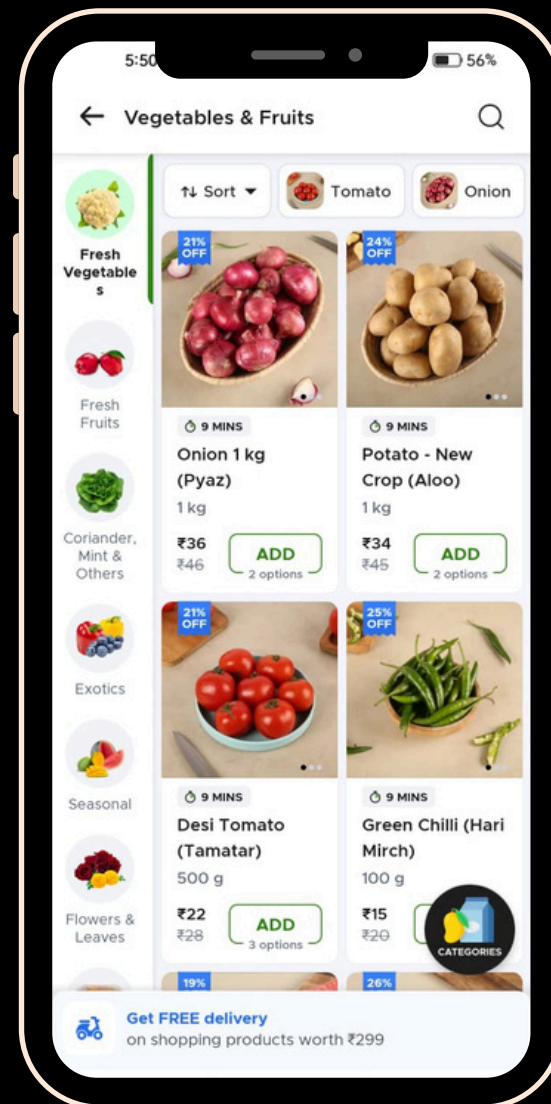

There is an option of “Notify” which will inform the user when the product becomes available.

02. Match between the system and real world

The design should speak the users language. Use words, phrases and concepts familiar to the user, rather than internal jargon. Follow real world conventions, making information appear in a natural and logical order.

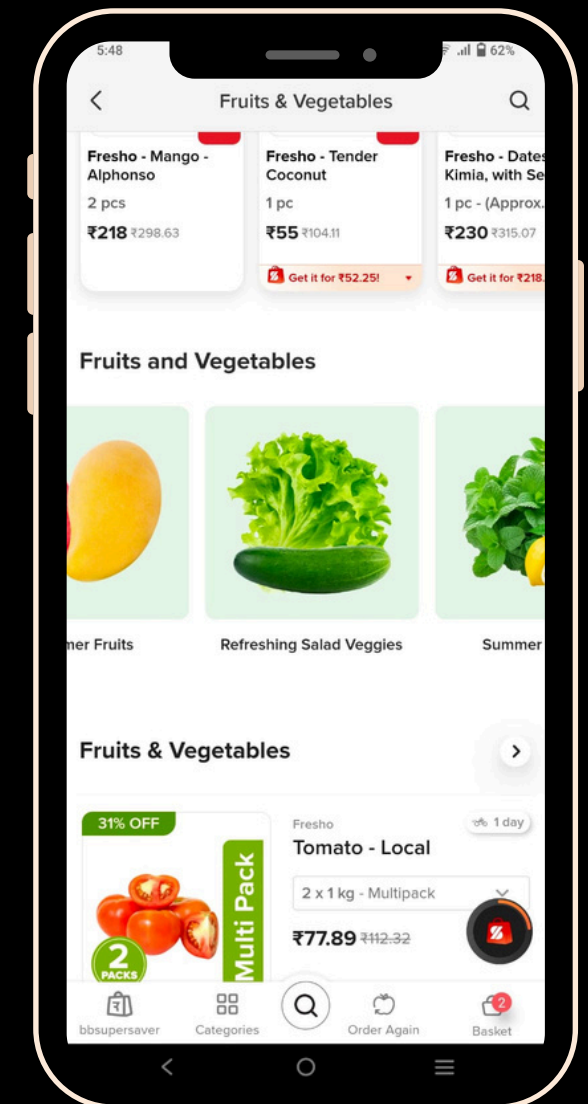

Issue:

User is familiar with one thing that when user taps on back icon user comes on the last page but here this thing doesn't work same. Here user come on home page by tapping back icon.

Recommendation:

Here we can add navigation bar, there will be a home icon that will take user to home page and back icon on screen will take user to the last page from where user began.

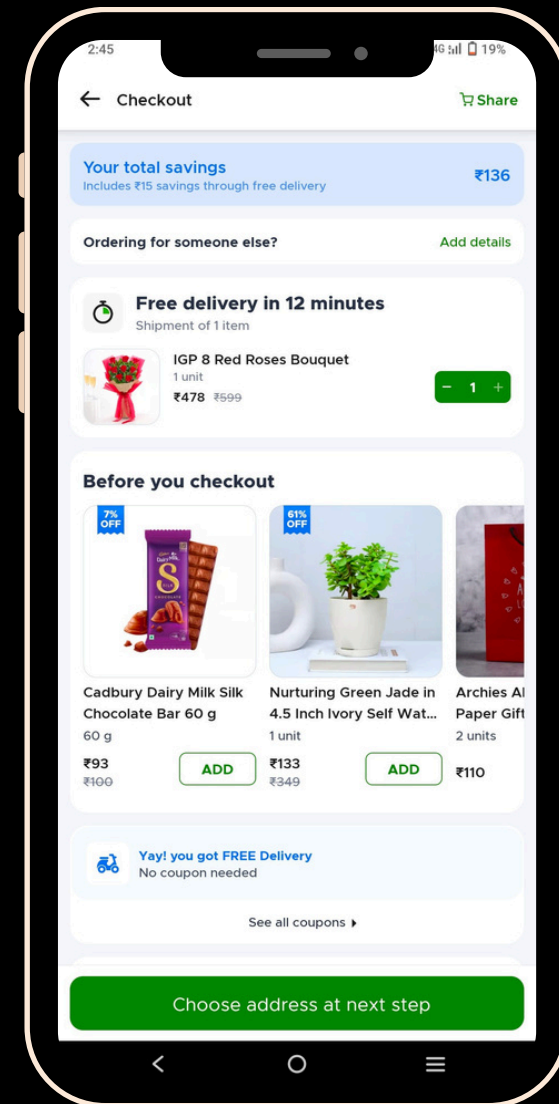

03. User control and freedom

The users can easily navigate through the system, make corrections, and exit unwanted states without feeling trapped or disoriented. It emphasizes the importance of providing users with clear and accessible options to undo actions, backtrack through processes, or exit from unexpected states.

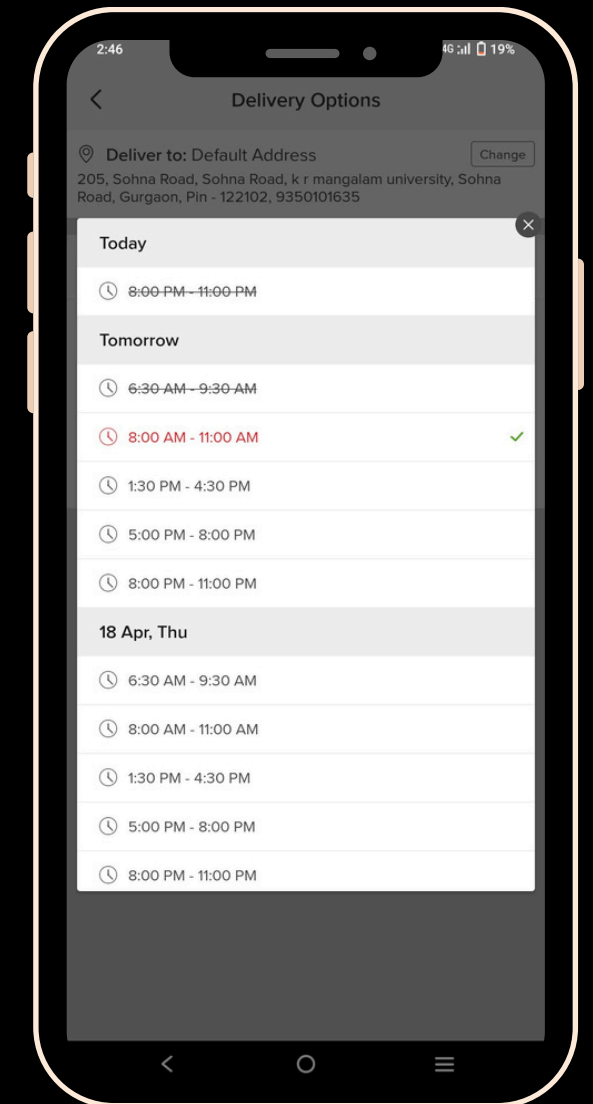

Issue:

The delivery time is given but there is not such an option given to change the delivery time or slot.

Recommendation :

The user has the ability to choose the date and time or the slot of the product delivery.

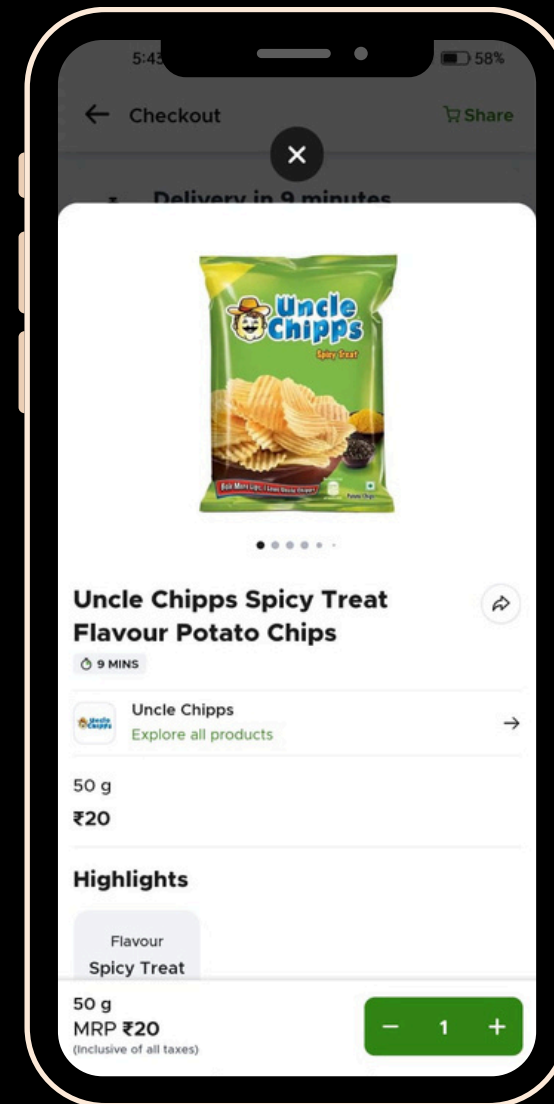

03. User control and freedom

The users can easily navigate through the system, make corrections, and exit unwanted states without feeling trapped or disoriented. It emphasizes the importance of providing users with clear and accessible options to undo actions, backtrack through processes, or exit from unexpected states.

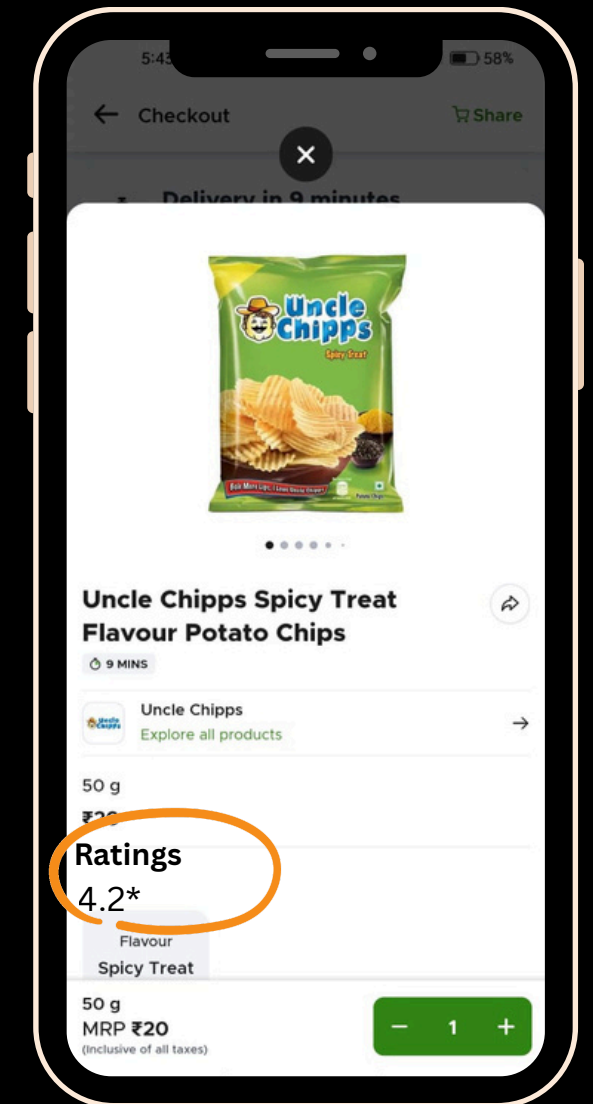

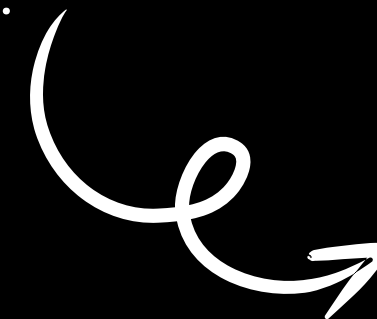

Issue:

There is no such term provided in this app, such as no product reviews and ratings.

Recommendation :

Options must be given to the user, what they feel about the product and share their experiences with other people as well, about the product.

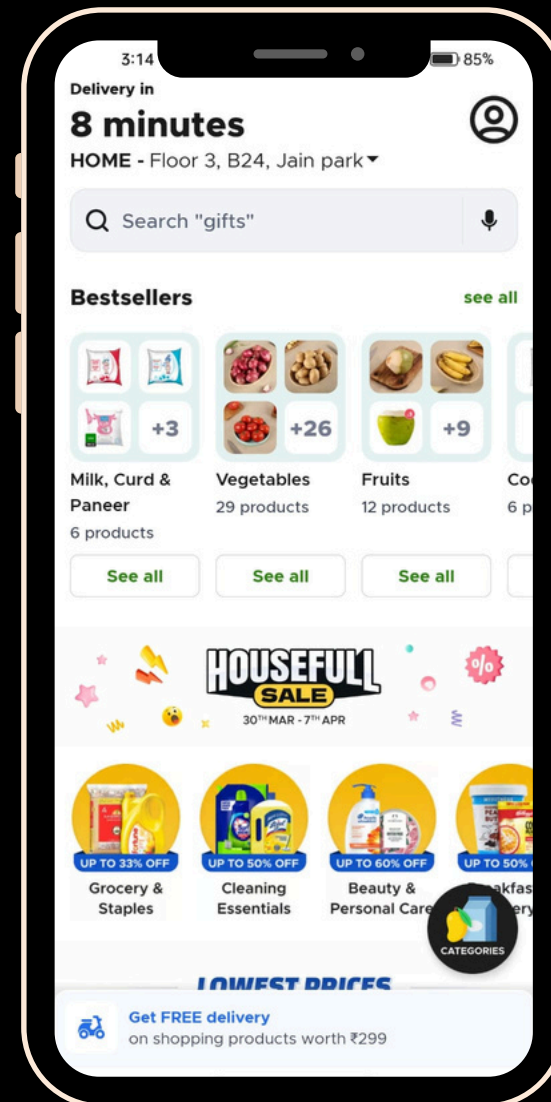

04. Consistency and standard

It is a principle that identifies the need for language, icons, symbolism and all other recurring elements within user interfaces to remain the same across different tasks.

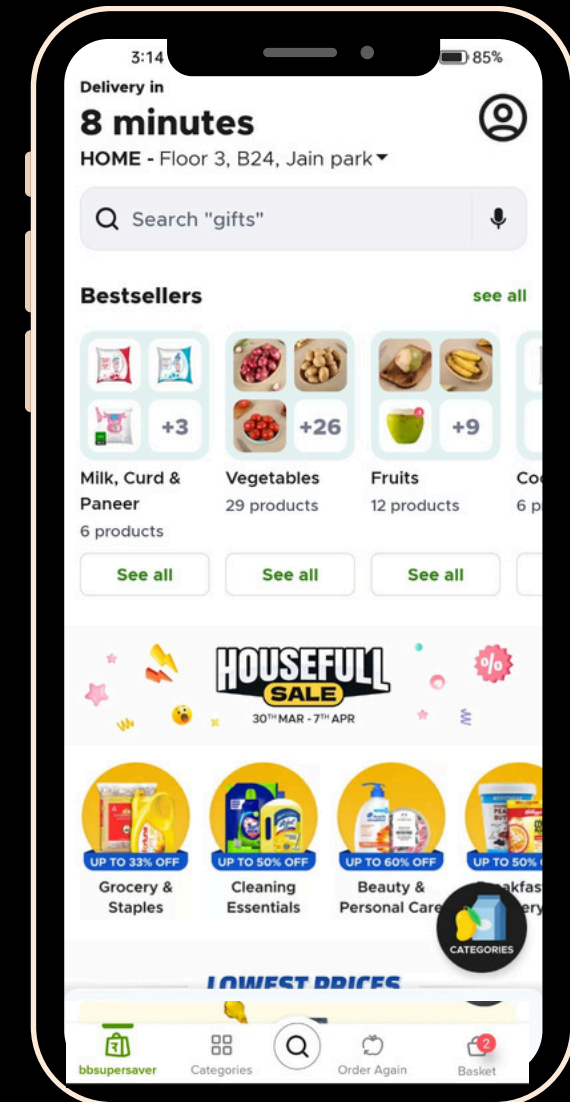

Issue :

The app does not follow industry convention, which breaks standard, like not giving option of navigation.

Recommendation :

An app should have a navigation bar to follow the standard of industry and help users easily to navigate in aap.

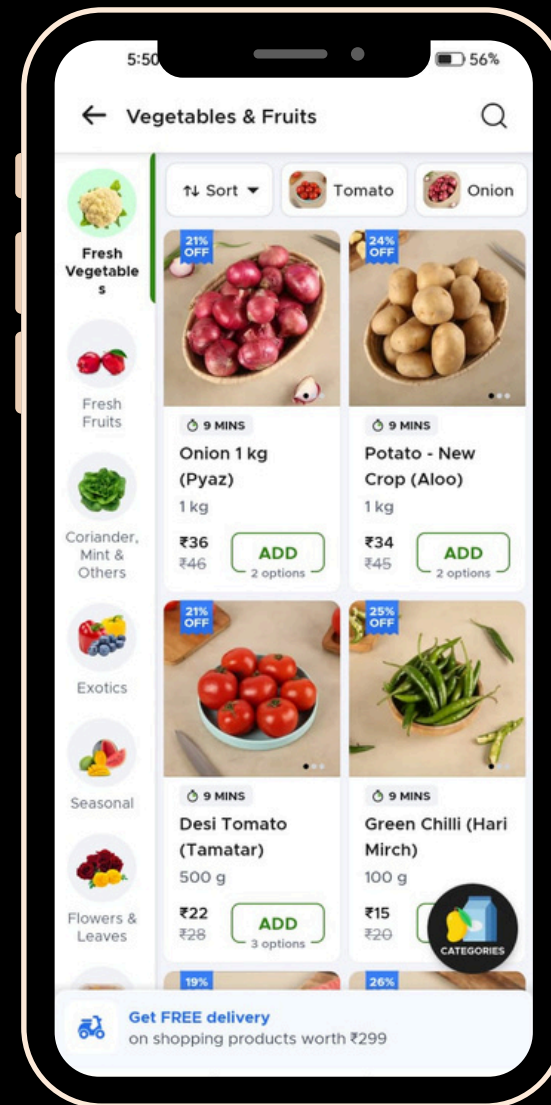

04. Consistency and standard

It is a principle that identifies the need for language, icons, symbolism and all other recurring elements within user interfaces to remain the same across different tasks.

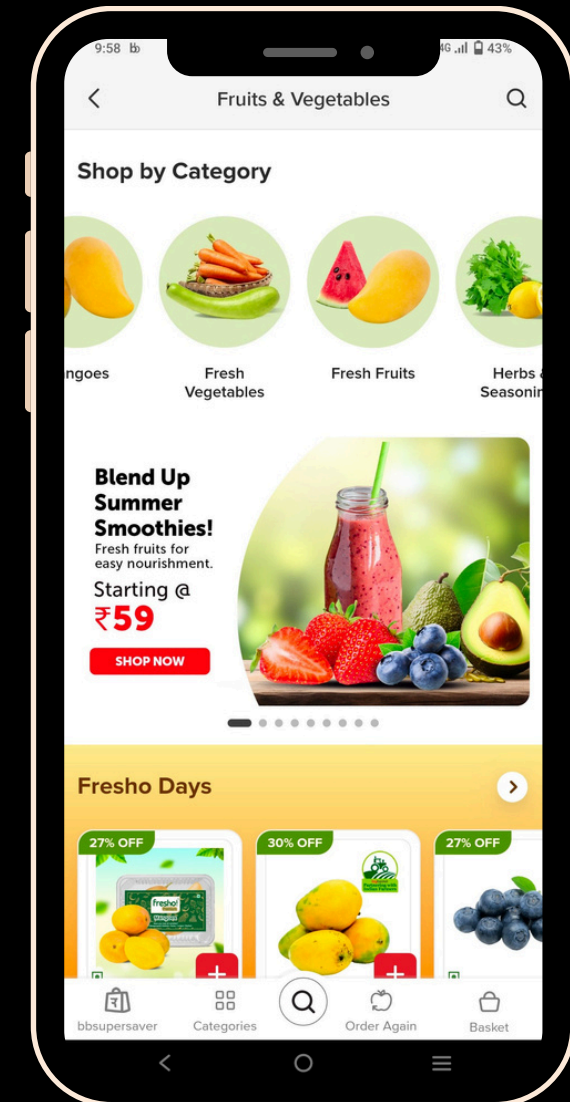

Issue :

The product section screen look very different and does not follow industry pattern, as slider goes vertically instead of horizontally here.

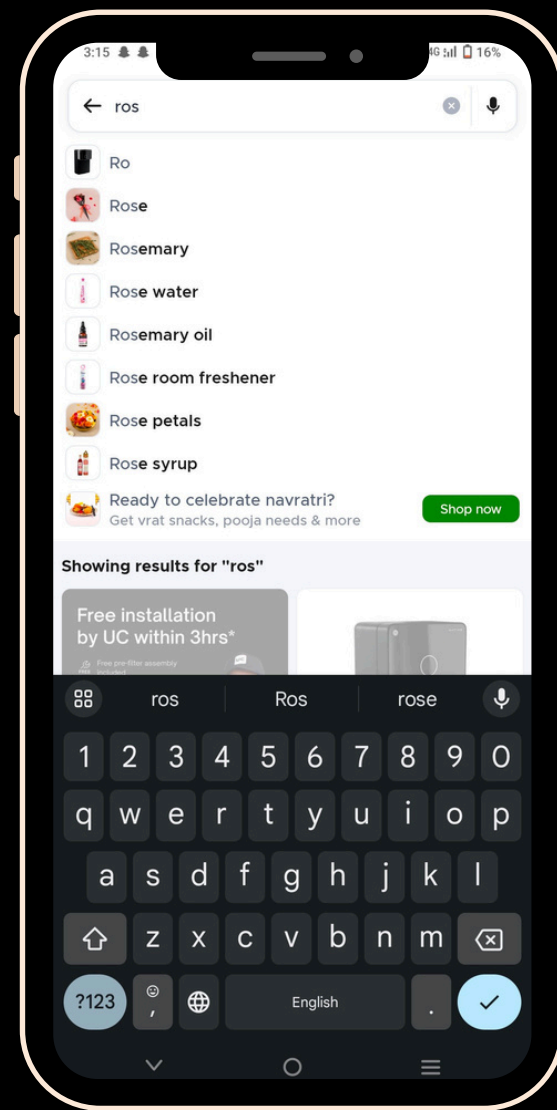

Recommendation :

The slider section should be follow industry convention, so its slider should be horizontally instead of vertically.

05. Recognition Rather Than Recall

It states that users should be able to easily identify and select the options they need, rather than having to remember them from memory.

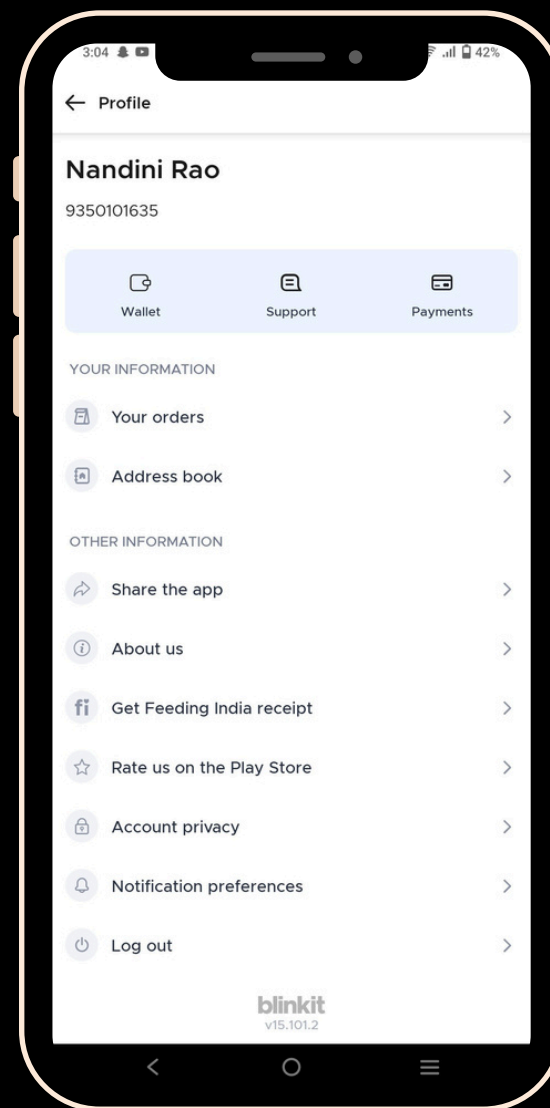

The search bar provides suggestions to the users while they type half word of an term, which saves their time.

05. Flexibility and efficiency of use

Short-cuts hidden from novice user-may spend up the interface for the expert user such that the design can caterto both inand experienced user. Allow users to tailor frequent actions.

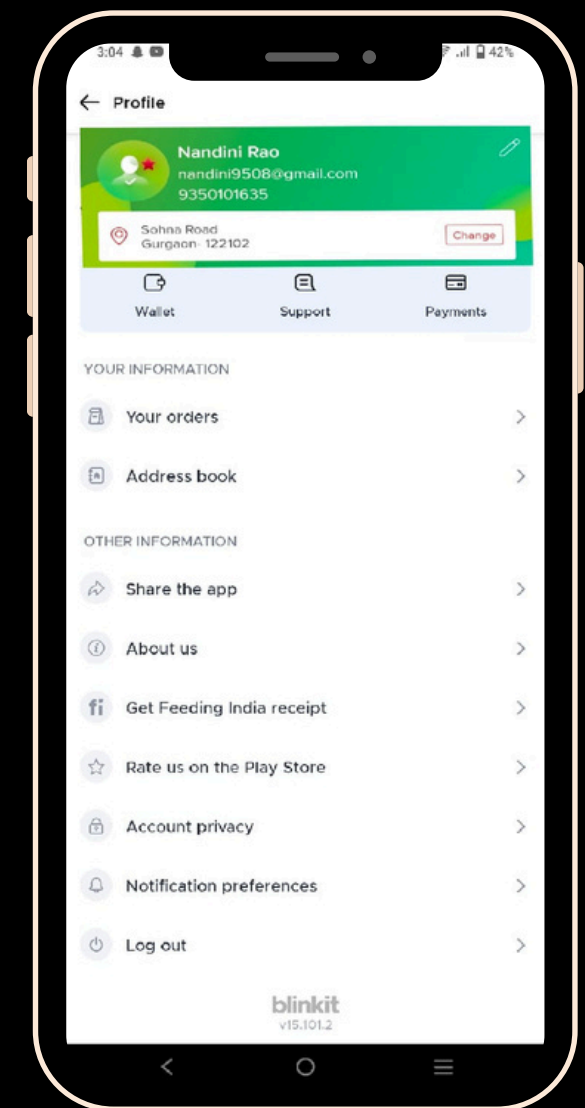

Issue :

The app shows inability to change their individual phone number, as it show the user cannot perform frequent actions.

Recommendation :

The design should be flexible to user, so there should be an option given to the user to change their number.

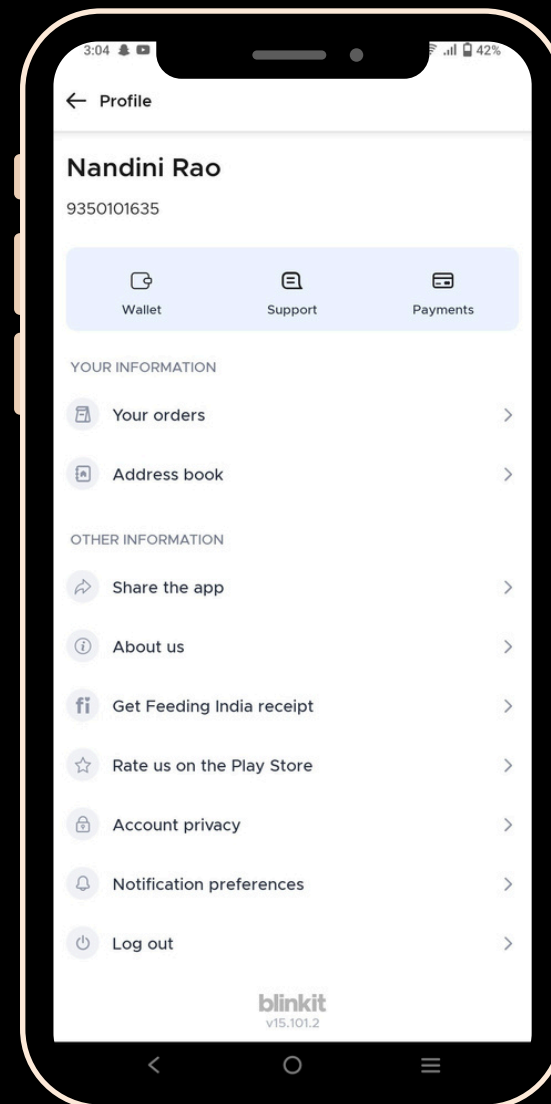

05. Flexibility and efficiency of use

Short-cuts hidden from novice user-may spend up the interface for the expert user such that the design can caterto both inand experienced user. Allow users to tailor frequent actions.

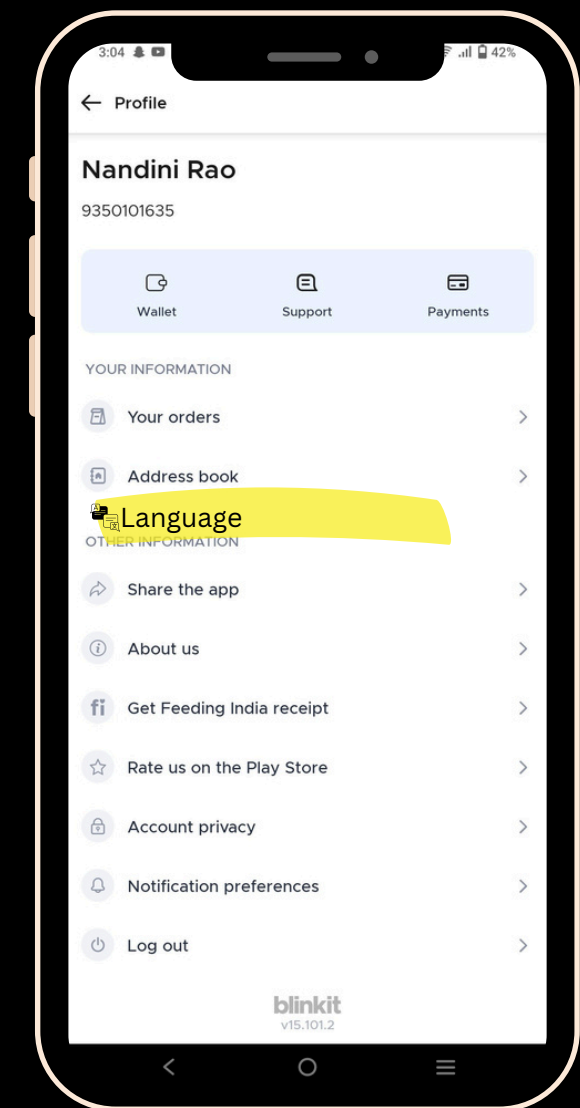

Issue :

The app is not language flexible, as it says “India’s last minute app” so it should provide language flexibility.

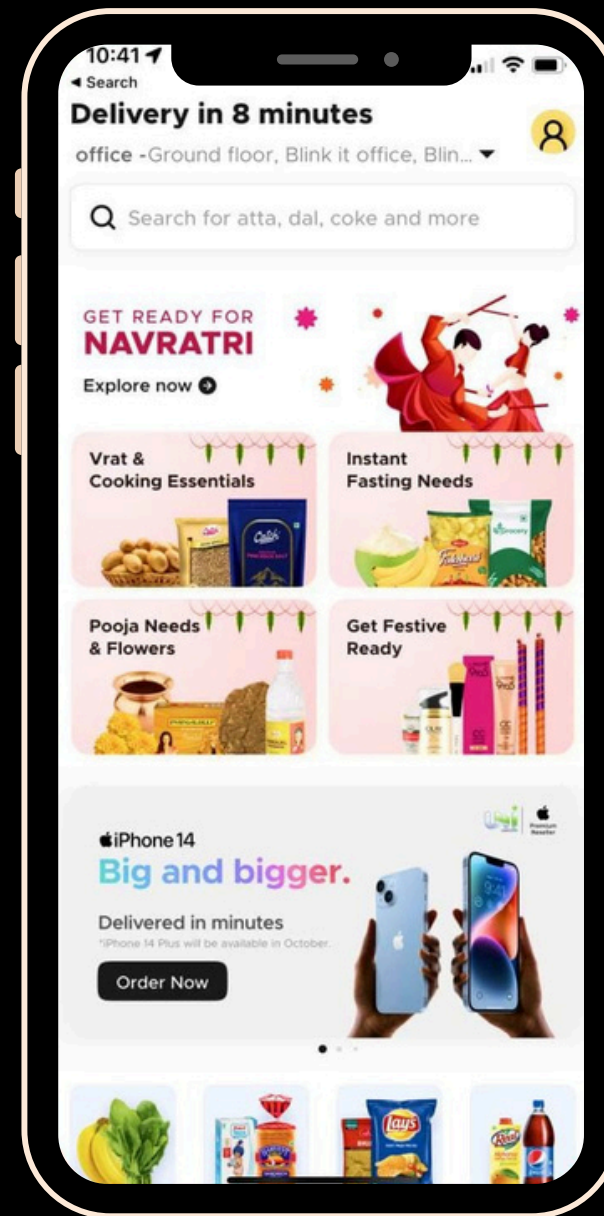

Recommendation :

An option that allows user to change language can be helpful here.

06. Aesthetic and minimalist design

Aesthetic and minimalist design prioritize simplicity, functionality, and elegance. They both emphasize clean lines, limited color palettes, and attention to detail. These styles focus on quality over quantity, making strategic use of negative space and typography to create visually appealing and timeless designs.

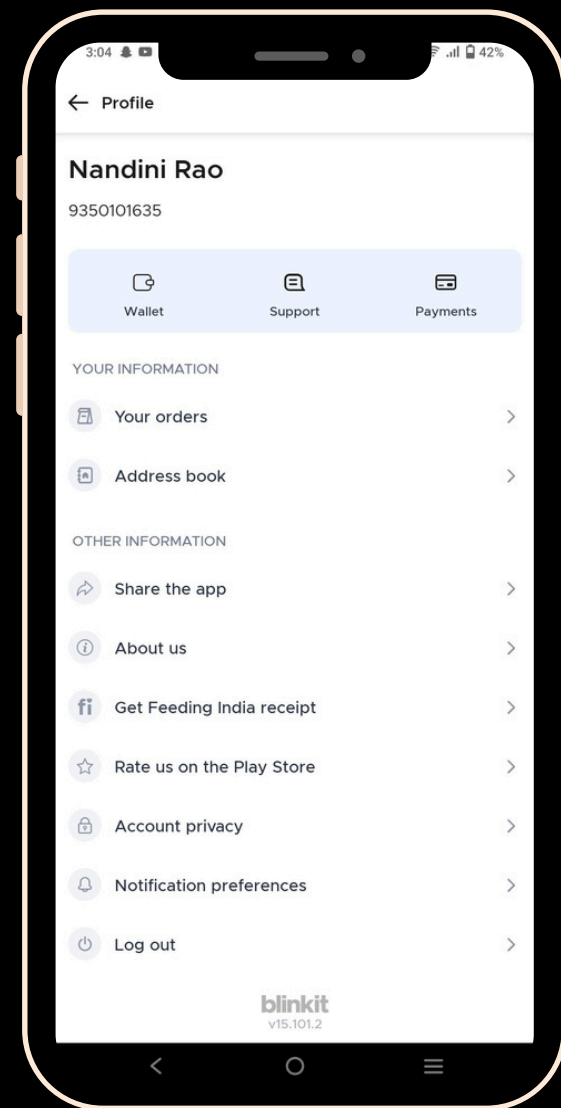

The overall design is consistent across the app. We can see the use of modern minimalist design with the strong usage of outlines, flat icons and clean types. minimalist design creates a user friendly experience and keeps the app flexible across the years.

07. Help and documentation

A system provides clear and accessible support to users, including instructions and guidance, to aid them in using the system effectively.

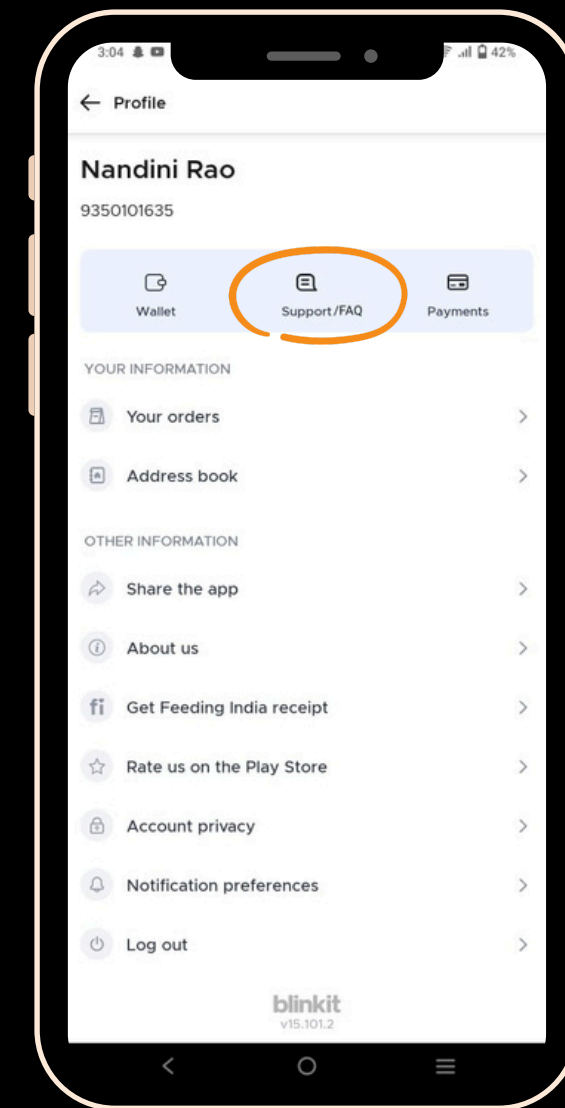

Issue :

The app does not provide FAQ option, which is violating the law of help and documentation.

Recommendation :

There should be a FAQ option which help users to guide user or to support immediately.

THANK YOU
